Casa ERNY | Architrend Architecture
Marina di Ragusa | Italy | 2014

The villa is located in the Marina di Ragusa, shining in her white net, defines the space surrounding and all perspectives of the villa which are connecting to the Marin landscape.

The pool which reflects the main façade, intensify the purity of the contemporary design of the villa.

The project exalts the relationship with the context by some choices such as the design of the platform in front of the building and the large window on the corner, offering an exceptional view on the beautiful coast of Marina di Ragusa.

The external metal staircase, clear reference to naval architecture, leads to the terrace and is protected by a pergola that has the same elements in steel and aluminum of the sunshade wall.

The outdoor garden and infinity pool, crossed by a light footbridge, are in direct communication with the ground floor, extending its use and livability.
